

## Playing with Data, Language, and Historiography

When I examine my current research and reflect upon my future research trajectory, I see three main threads emerging from my work: continued pedagogical work with play in the classroom; developing curriculum and assessing the undergraduate major in writing and rhetoric; and interdisciplinary research in the digital humanities, especially focused on historiography and digital archives. I see these different threads as overlapping and related to my teaching and service.

### Data, Technology, and Historiography

My primary area of research interest utilizing data visualization and computation with historiography in rhetoric and composition, where my dissertation research works at the intersections of data, history, disciplinarity, and rhetoric. My dissertation, “Tracing *Techné*: Distributed Histories of Invention, Creativity, and Text-Technologies in Rhetoric and Composition Scholarship from the 1990s,” uses data drawn from a corpus of rhetoric and composition field journals from the 1990s to inform and critique disciplinary histories and historiographies. This research has led to acceptances to the 2020 and 2021 Conference on College Composition and Communication and the 2020 Rhetoric Society of America Biennial Conference. I presented “Historiography, Hospitality, and Data,” a talk on using computational methods to examine and perform historiography, to the Rhetoric Society of America FSU Student chapter in May of 2020.

I plan to develop out of chapters one and three a research tool for other scholars in rhetoric and composition, seeking interdisciplinary and collaborative spaces to continue that work. This will draw on the data curation methodology that I utilize in my dissertation for other scholars to trace keywords within large sets of textual data. I look forward to not only creating this tool, but also publishing on how this methodology utilizing data can be used in rhetoric and composition. I also plan like to develop publications out of chapters four and five to critique historiographies of *techné* and the discipline of rhetoric and composition and explore how they inform current theories of *techné*. I have My dissertation work has also emerged from my other two research areas, and my work here also influences my research into current and future practice in theory, curriculum, and pedagogy.

### Pedagogy and Play

I also have an interest in play in theory and pedagogy. I found a deep love for language, and how language could become manifest in materials and moments through my scenic route through my education. Play draws a bridge to the work being done already in rhetoric and composition, and especially within the computers and writing community, to gaming, gamification, and pedagogy. I presented on play and pedagogy with “A Symbiotic (and Pedagogical) Relationship: Forging an Alliance between Creative Nonfiction and Composition” at the 2017 Conference on College Composition and Communication and “The Efficacy of Play as an Organizational and Pedagogical Theory” at the 2017 South Atlantic MLA conference. I have also presented at FSU about play and invention in the writing center and in the composition classroom. I am also currently finalizing a manuscript on play within the college composition classroom.

### Undergraduate Curriculum

My third area of interest is in the undergraduate major in rhetoric and writing, especially in considering the curriculum and assessment. This work has led to a co-authored chapter “Institutional Matters: The Localized Conditions of WPA Labor,” that deals with, in part, the undergraduate major through the localized experiences of writing program administrators and the education of graduate writing program administration education. This research interest has also been shaped by my time teaching within Florida State’s editing, writing, and media major in the English department. At the 2019 Feminisms and Rhetoric Conference I presented “Student Activism, Assemblage, and the History of Rhetoric,” on a panel that explored using assemblage theory in pedagogy, and my talk was focused on using assemblage to engage students with their activism in the context of a rhetoric class. I was also accepted to the 2020 Conference on College Composition and Communication for a proposal considering how data can be used in the teaching of advanced composition. I also see this work with the undergraduate major as serving as an intersection for service and research, and a rich area for collaboration.
